**OPERATOR ONE-PAGER**

Main window (anonymized example)

# Less fatigue. Faster review. Cleaner reporting.

SonarScout turns raw detections into a structured event queue so you can triage quickly, add notes, and export a consistent report — even offline.

### Event structuring

Detections → tracking IDs → clustered events with best-frame thumbnails.

### Review tools

Jump to frames, validate candidates, adjust confidence thresholds.

### Offline-first

Core workflow runs locally. Optional map view when internet is available.

### Exports built for scrutiny

PDF reports + evidence packages designed for reproducibility and auditability.

### Typical workflow

- Import MP4 (+ optional GPS logs)
- Run scan: detections + event clustering
- Review queue, annotate, export report/evidence

### Detection focus

| **Body / Vehicle**<br>Classes | **Thresholds**<br>Adjustable | **Offline**<br>Mode |

Important: AI output is not a final decision. The operator confirms and documents all findings.
