

PROCUREMENT BRIEF

Main window (anonymized example)

Deploy AI decision support without changing your sonar hardware.

SonarScout helps trained side-scan sonar operators review missions faster and generate defensible documentation — offline-first and vendor-agnostic.

Decision support (operator stays in control)

AI highlights candidates; qualified personnel review and validate every finding.

Works with existing hardware

Retrofit approach. Garmin-first today; adaptable to other workflows with representative training data.

Offline-capable & secure

On-device processing. No cloud dependency, no automatic uploads.

Court-ready reporting

Evidence-grade exports with reproducibility and audit-friendly structure.

What procurement teams care about

- Local processing (offline-first) for sensitive operations
- Integrates into existing workflows — no fleet-wide hardware replacement
- Repeatable exports for chain-of-custody style documentation

Measured performance (controlled tests)

94%
Body recall

90%
Body precision

Court-ready
Reports

Important: SonarScout provides decision support for trained operators. All detections must be reviewed and validated by qualified personnel.
